

ISA Pavement Stencil Instructions:

Note: This requires tape purchased at a home improvement store to create the Blue Box and White 4" Stripe

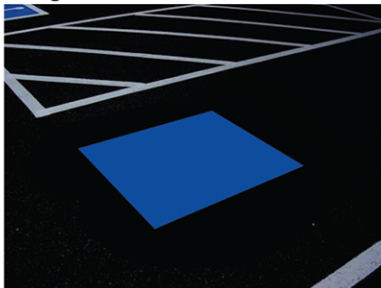

- Decide the location of the stencil. Wheelchair ISA Symbol should always be positioned at the rear of the parking space to be seen under a parked car.

- It is recommended in California to paint a 4" white border to create a 49" overall size. Position the tape inside and outside the blue border creating the required 4" line.

- Use the stencil as a template, tape around the outside of the 45" stencil (using painter's tape) to make a square, remove stencil, spray or roll the blue paint background color. Now you have the background blue:

- After the blue square is dry, position the stencil again over the blue paint and spray the white for the wheelchair symbol.
